

## **HUMAN NEEDS: ENERGY-HEALTH CARE-FOOD**

Petroleum Producers , 6+ Major Corporations producing global food supplies and Pharmaceutical Companies have operated over many years for the sake of their own profit with disregard for the well being of all Living creatures and our Planetary Home.

**As we fund, generate and cultivate new systems harmonious with Life and Planet Earth, the old dis-integrates or has no need to continue.** Assign a team, devising a 10 year plan to transform corporate entities into Life Giving Planetary Services, through funding viable Life-generating systems, that ultimately naturally replace destructive old paradigm ways.

**FUND: All progressive programs in energy, health care and food production** based in true harmony with health and well being for all. All of our projects complement one another. Each one makes the others more viable. We encourage funding of this as a comprehensive proposal rather than individual projects. They are described individually for ease of comprehension.

*“The best way to get rid of the old is to bring forth something better.”*

### **ENERGY**

- Scientists and engineers around the world are ready and willing to work on free and creative energy solutions to carry humanity beyond the slavery mentality that we have to pay for something that comes to us freely in nature not yet utilized. Fund them to do it at home, in collective production centers, in online think tanks and more... Our future depends on getting this done Now!

**•FUND Quantum Energy Research Group and other collectives** of serious, visionary engineers and scientists bringing forward new free clean energy technologies through individuals, mastermind groups and production centers.

## FOOD PRODUCTION

- Fund anyone involved in or developing organic agriculture, permaculture, holistic management, adaptive, Earth-friendly technologies based in harmonious interaction with the Earth and one another rather than profit. Cultivate Earth-Friendly systems to eventually eliminate the old profit centered paradigm. Create innovate ways for food to be growing abundantly everywhere on Earth!!! (neighborhoods, cities, rural areas, naturalized areas)

## HEALTH CARE

- It is time to end the suffering that comes from dis-ease and illness caused by inharmonious living. As we harmonize with Mother Earth, the Soil, the Water, and our own higher thought we restore health and wellness to ourselves, our loved ones, our children and grandchildren and those who come after.
- Fund anyone involved in herbs, homeopathy, energy medicine, traditional medicine. Start wellness centers where traditionally trained doctors work hand in hand with alternative healers. Shift training in universities currently underwritten by pharmaceutical companies to a holistic balanced system.
- Utilize innovative new systems such as Intero Machines, Mandalas, Skenar that can broadcast frequencies into cities for health and well being.

# COMPREHENSIVE ENERGY PROPOSAL

© The Waters Trust, 2014 All Rights Reserved

## CURRENT SITUATION FOR THIS CVAC

Our actions over the next few years will be pivotal. The sheer number of converging issues that mankind is facing at a global level currently overwhelm our abilities to understand or react within the current paradigm of scientific belief. It is now a provable fact that these very beliefs helped create the complex economic and environmental instabilities that we are now dealing with. This issue is outlined in more detail at <http://cureforglobalcrises.weebly.com/>

We look forward to and will be honored to receive global humanitarian funding from those far-sighted individuals who can see that this is the way into a viable future. Thank you.

## IDEALS ENVISAGED

At a fundamental level, recovery requires a radically different perspective. Fortunately, this perspective is profoundly simple, as are the resultant solutions. Transition strategy is a little more complex but now supported by a crystal clear roadmap of basic cause and recovery.

The arsenal of breakthroughs that we have discovered in each area are transformative. This is a global gathering that includes revolutionary breakthroughs in energy, health, water, agriculture, mining, education, transportation, waste recovery, communication, economics, sustainability etc.

Synergistically, these capabilities are orders of magnitude greater in potential impact than they are individually. This is why integrative sustainable community templates or recovery tools such as the Lifepod are so critical. If economic and environmental

sustainability can be achieved with a practical template that honors local cultures and climates, a road map of recovery at any scale has a far better chance of success. These templates integrate cutting edge science and urgent application.

Integration projects (templates) that enable a far greater sweep of capabilities, simplify the funding process, align goals, foster collaboration and enable global dissemination of dozens of breakthroughs within a single, simple mission.

## CURRENT SITUATION, STRENGTH, THREATS

This path to recovery is no longer a matter of choice or a consideration for the future. The issues we are currently facing are potentially catastrophic and imminent. True sustainability based on corrected science is our best and last option for preventing a perfect storm of converging disasters with a profoundly simple cause of which most of humanity is ignorant.

## CORE ELEMENTS & GOALS

### **Proposal**

What has been gathered is a group of capabilities that are ready to connect with other proposals and solutions. Collaboration is key. Choosing only the best solution for each sector such as energy or agriculture, is an old paradigm concept with severe limitations. The goal is to benefit from the integration of dozens of breakthroughs in each sector. This will save time, reduce cost and provide a far greater capability for global recovery. Following is a brief overview of our energy capabilities alone. The same capability exists in all sectors with an arsenal of breakthroughs in each area. Energy is still a primary component with direct bearing on all sectors including transportation, water purification and agriculture etc.

### **Energy**

Our focus has been in researching and gathering fuelless, permanent energy sources and technologies based on cutting edge discoveries in physics. Two main categories:

- Transition technologies such as more efficient wind, solar or waste to energy .

- “Free” energy breakthroughs that take us beyond all current sources with abundant 24/7 access and high power density.

## CORE ELEMENTS & GOALS

### **Transition examples**

Our wind turbine revolutionizes the current wind industry. Third party tests show efficiencies in excess of 120 times greater than current designs. Based on these validations, this is by far the most efficient wind turbine in the world. Cost is far lower for a given output. This can dramatically increase the viability of wind economics.

A number of transition technologies that reduce pollution of engines while increasing efficiency. These include fuel vaporization, HHO, magnetic and holographic restructuring of existing fuels. Each has (separately) proven results between 20% and 100% efficiency gain.

Significant breakthroughs in solar efficiency.

### **Definitive energy breakthroughs**

Behind wind and solar breakthroughs(as well as other sectors) we are embedding technologies that enable far greater performance and significantly lower cost. We can amplify the output of our wind turbine by another 8 times for instance for a given size.

A generator breakthrough that operates at higher than 100% efficiency with an economical and lightweight scalable design.

A solid state breakthrough that provides amplification of over 40 times.

A powerful, simple pump technology that is self-sustaining (operation requires less energy than apparent energy input) with very high flow rates. The pump was originally intended primarily for Africa but the need is universal. We are currently integrating a turbine and generator technology for a complete, low cost home generator/pump solution.

### **Desalination**

Conversion of water directly to hydrogen with very little energy input. This means that oxygen is transmuting to hydrogen in the process. Current 3<sup>rd</sup> party measurements show more than 1600 times amplification of electrical input.

Burning sodium in water and removing contaminants without filtration with amplification in excess of 10 times.

Water treatment that prevents and kills pathogens with a considerable boost in crop growth without chemicals.

A water cavitation process that produces heat without fuel (replacing coal or other sources of fuel to drive turbines etc).

A plasma rod approach that create heat without fuel. This is similar in capability to the cavitation approach and is able to replace fuel rods in existing nuclear reactors without radiation.

The importance of desalination is clear. The highest population density is coastal. An affordable source of both energy and water is now available from the ocean. This is vital to deploy as soon as possible.

## VALUE BEING RETURNED TO THE PEOPLE

### **Primary funding goal and reason to create additional income streams:**

A global, peaceful transition to a fuel-less energy economy

Complete sustainable recovery templates that provide access to energy, water, food, housing, health, education - at any scale or budget.

Sustainable centers that demonstrate complete sustainable community templates, education centers and/or advanced research facilities.

Individual projects with potential global impact, breakthroughs and leading talents in energy, water access/purification, agriculture, wellness, education, consciousness, remediation, mining and resource recovery.

Helping to integrate and deploy all of the above at a global level in collaboration with similar initiatives. Educate regarding cause and demonstrate how simple the solution is.

## **Conclusion**

Our core team has a group of energy technologies that allow transition to occur at multiple levels. Our wind turbine is a primary component in a number of PPA's currently under discussion. While this is a revolutionary step for the wind industry, embedded behind this turbine is a group of far more advanced breakthroughs that actually obsolesces wind and solar energy. These technologies can amplify energy by any degree that we choose and cost far less per kw.

Wind and solar technologies are currently easier for most people to understand. PPA's and various credits are already configured for wind and solar. These large PPA contracts can provide substantial primary income streams to support other projects. We currently have PPA projects under negotiation in Africa, India, South America and the US. Funding is apparently under consideration but what is really needed is rapid, decisive action. The longer we wait, the more difficult it will be to recover.

Thank you for your consideration.

Michael Waters

## **MILESTONES & PROPOSED START AND FINISH TIME**

This process has already been initiated by many scientific minds on the planet now dedicating themselves to solutions required for our very survival. Underfunding has delayed the process, so funding will simply allow us to surge head. We are capable of distributing funding among many efforts now going on and adding new to those. So start time is yesterday, or immediately upon funding. One year should let us know directionally where our strengths are and to continue forging ahead in those areas. By year two we should be able to implement new systems globally, after test runs in the field during year one. Eventually this entire process will become self-sustaining, however during a ten year phase in of new emerging systems and phasing out of old,

polluting, costly, dis-integrative systems, continued funding toward comprehensive global eco-change will be greatly appreciated by millions yet unborn.

## COLLABORATIONS AND GAPS

There are many forward thinking scientific minds around the world now collaborating in small groups and home operations - determined to move us through into the new free energy paradigm. Open source is one solution. Another that I will address with Michael Upstone is allowing open source for "not for profit" and any corporate entity that would like to use the technology for profit pays a usage fee. This innovative new way of encouraging both creativity and business opens the doors to a huge paradigm shift - good for creative human minds, economics and progressive methodologies.

Other projects within this Global Leadership for Change Proposal are critical to the whole - for instance collaboration with Virtual Earth Village and ExpandingU for documentaries, radio, tv and web are essential to keep true information flowing, educating the masses as to how changes are taking place in a holistic and beneficial manner that they have access to, providing assistance to the people of this planet, supporting the free will, safety and comfort of all humans.

All beings have a free right to everything provided for us by Mother Nature / Earth. A gap may be the transition that will have to take place from the polluting, expensive fossil fuel culture into free clean energy. As with other aspects of this proposal, the new ways holistic in nature will ultimately speak for themselves, and when properly funded become wayshowers into a New Earth life based in equanimity.

## FINANCIALS

SEED FUNDS: \$1,000,000,000

INITIAL PROJECTS: \$1,000,000,000

GLOBAL IMPLEMENTATION: \$2,000,000,000 with more funding to be delegated to this as solutions emerge, as requested.

Funding for a global energy program should allow at minimum, \$5 billion to establish. This will enable us to deploy and further develop vital energy breakthroughs that our world needs desperately. Funding for equally effective programs in water purification and agriculture would benefit from a similar amount.

When faced with global urgency, the speed and effectiveness of a transformative project depends primarily on the amount of resource effectively deployed. Income streams take time to expand. \$Millions allow a slow, small result that hopefully grows. ***\$Billions can reduce time significantly with massive global results in a far shorter period of time. Since time may be our greatest and most immediate concern, the sooner we deploy these resources, the better.***

***NOTE: MOTHER'S SUFFERING*** - Now supporting all projects that can reverse irresponsible trends and restore balance to Earth's beautiful creatures.

The Arctic is the frontline of our warming climate — heating up twice as fast as anywhere else. It's also the frontline of the oil industry — one of the dirty fossil fuels responsible for the melting in the first place.

With the help of all of us shifting direction in many ways, we'll stop the oil companies that want to drill in the Arctic and declare it a global commons for all.

Together, we can save the last remaining polar bears and their fragile Arctic homes. We also support Greenpeace and other Earth care organizations.

**CONTACT:** Michael Waters, NEST (see GLC-Bios)

[\[return to projects list\]](#)

## **INTERNATIONAL NETWORK OF NATURAL HEALING AND WELLNESS CENTERS - SERVICES AVAILABLE TO ALL:**

### CURRENT SITUATION FOR THIS CVAC

Responding to a desperate need for basic *wellness care* - we intend to implement an international network of healing and wellness centers to carry us beyond palliative and suppressive measures currently practiced by the medical -pharmaceutical establishment.

The truth is when cared for properly the movement of the body-mind-spirit is toward health and wellness. Much of this knowledge has been lost in recent centuries of making medical practice a “business.” We will be honored to receive global humanitarian funding to move this project into being.

### IDEALS ENVISAGED

- **To practice, serve and support with foundational knowledge of natural and healthy living, carrying us beyond the heavy need for toxic unnatural pharmaceutical solutions**
- **To mitigate a transitional path of blending the best of medical practices with natural, nutritional, herbal, energetic, acupuncture and homeopathic systems**
- **Implementing a pattern for *holistic dental clinics*, where well trained staff can practice, earn comfortably, and integrate holistic methodology such as meridian testing, removal of base metals, improvement of dental health through diet and hygiene**
- **Our intention is to put together models that can fill this need globally.**

Through such centers we teach many to begin functioning from “i-llness” to “we-llness.” This foundational dynamic that already exists in ancient health systems and is coming forth around the world but needs to be amplified, initiates a turnaround in our corrupt health care systems. Pharmaceutical companies motivated by greed have driven the medical profession into a subservient role, where they are now administrators of medicine rather than healers of the people.

### CORE ELEMENTS & GOALS

- Supporting practitioners to broaden and deepen training and skills
- Support Existing & Emerging Centers to improve and expand
- Education as to value of preventive care of Body-Mind-Spirit
- Opportunity beyond economics for all to have access to these services
  - Blending traditional medicine to merge with effective healing practices of progressive and ancient energy systems, transitioning into new wellness methodology
  - Community Classes in nutrition, meditation, essential oils and other basics
  - Video courses and training for duplication of progressive systems

Cary Ellis, DD,  
Global Leadership for Change

*Making the kind, gentle care of Body-Mind-Spirit available to All! Who wouldn't like a weekly massage, energy therapy, water healing for easing Life? Restoring the birthright of good health to all.*

Ken Chorley, President

Global Leadership for Change

### MILESTONES & PROPOSED START AND FINISH TIME

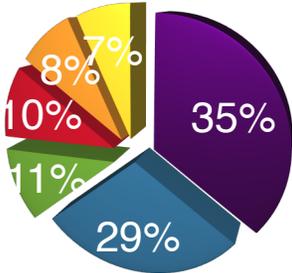

We have already located a property with large home, small home, acreage along river nestled in the mountains with hot springs for healing. We are ready to purchase this property as soon as funds are provided. A health practitioner in the area is ready to run programs at the site. It should take very little adaptation for initial phase, and then adding small cabins and a main meeting and kitchen facility, hot tubs and bathhouse established around best natural healing practices will be initial construction during first year. We then should be able to increase numbers of people who can attend programs at center, learn what areas we need to make adjustments in and begin to duplicate globally. In year two we would expand to 3 more locations globally, and multiply out from there.

VALUE BEING RETURNED TO THE PEOPLE

In addition we would like to request funding a health “insurance” perhaps devised in one of our suggested alternative currency systems - that whenever a person feels the need for supportive wellness care they would have resources to draw upon to provide them such. Because health and wellness is such a pervasive need we would like to establish a new kind of currency around this / answering human need in both developed and undeveloped countries/ that feeds into and nourishes a self-sustaining system. Michael Upstone (info in bios) will help develop this system.

HOW TO GET THERE

- Obtain and Develop Model Retreat Center
- Website, Videos, Online Teaching
- Retreats and Services
- Staff and Instructors
- Advertising-Marketing
- Admin and Professional Services

## COLLABORATIONS AND GAPS

There has been an emerging natural health care movement around the globe successfully integrating ancient customs with modern holistic knowledge. All living beings have a birthright of freedom and health, provided to us by Mother Nature and our beautiful planet Earth. A gap may be the transition that will have to take place as we shift away from the pharmaceutical culture, established for profit, and rather than truly heal and remove conditions it simply suppresses them. As with other aspects of this proposal, the new ways holistic in nature will ultimately speak for themselves, and when properly funded become wayshowers into a New Earth life based in well being.

Other projects within this Global Leadership for Change Proposal are critical to the whole - for instance collaboration with Virtual Earth Village and ExpandingU for documentaries, radio, tv and web are essential to keep true information flowing, educating the masses as to how changes are taking place in a holistic and beneficial manner, providing assistance to the people of this planet, supporting the free will, safety and comfort of all humans.

Home and local gardens, healthy soil, microorganisms for cleaning up pollution all relate to health and well being. As they are presented among the group of projects requesting funding here, there will be much overlap among us, interrelated and by joining together bringing better results as an integrated whole.

## FINANCIALS

SEED MONEY TO LAUNCH INTIAL CENTER - PROPERTY IN ROCKY MOUNTAINS WITH NATURAL HOT SPRINGS: \$6 million

YEARLY SUSTAINABILITY BUDGET: \$6 million

BUDGET: Support Existing & Emerging Centers Nationally and Globally \$100 million

CONTACT: Cary Ellis & Ken Chorley, Founders Global Leadership for Change and Michael Upstone (see GLC-Bios)

[\[return to projects list\]](#)

## **Lifepod - Decentralized Food-Water-Energy**

**A strategic global recovery tool developed by Michael Waters**

### IDEALS ENVISAGED

*Off grid sustainable communities are the future, but current technologies are expensive. Is it possible to remove most of the complexity and cost from sustainable community design?*

*More importantly, is there a sustainable solution for modifying existing homes and communities, since this is where the vast majority of humanity lives?*

*What if any home could be converted to provide all basic energy, food and water needs indefinitely, becoming fully sustainable, off grid.*

*What about a hurricane, tsunami, earthquake, eruption, economic disaster? How do you still protect your family if you have to leave your home?*

*Could all of this be achieved at no cost?*

*These are the questions that led to the Lifepod solution.*

### CURRENT SITUATION FOR THIS CVAC

***The Lifepod is designed to provide sustainable off grid conversion of existing homes and communities, at a global level, at no cost.***

Building an off grid sustainable home using wind or solar energy is expensive. Energy use must be balanced carefully. Efficiency is critical. Extreme climates make this task even more difficult. Yet the essence of a sustainable home or community is simple – to produce all energy, food and fresh water needs on site. It is the current level of technology that makes this task complex and expensive.

By reducing these key issues down to a single portable system, design of both sustainable communities and conversion of existing communities becomes far simpler. This is not possible with traditional technologies. We seek funding to move ahead with this project.

IDEALS ENVISAGED

### **The Lifepod solution**

**The Lifepod integrates advanced breakthroughs in energy, automated superorganic food growth and water extraction technologies into a single portable modular system. The Lifepod can produce all power, food and drinking water needs for a family home indefinitely from a small 7' x 12' trailer. This decentralized approach can provide security in any location or climate. More importantly, it can be deployed at no cost, since the monthly savings in food and energy are greater than the monthly cost of purchase.**

### **Simple solution**

With a Lifepod attached to a home, super-organic food is grown automatically in an enclosed climate controlled space – a living pantry. Insulation and an advanced LED grow light system provides optimal growth conditions in any climate. This allows a fully insulated enclosure without need for sunlight. All fresh drinking water requirements are extracted from the air indefinitely even in a desert climate. Power is provided by a fuelless Zero Point generator that provides all electrical needs for the home.

In many areas, the Lifepod would not only cost nothing, but a considerable income could be generated by selling energy back to the grid. The average home in the US only uses 25<sup>th</sup> of the rated line capacity which means that, at 10 cents/kwh, a Lifepod would earn over \$2,500/month in energy income alone.

## Advantages

True family security comes down to self reliance. In affluent cultures, a centralized economy is far too vulnerable to a variety of potential threats while in the third world, lack of basic resources cause significant stress and hardship. Even from a day to day perspective for the average American family, the stress of earning enough to pay for basic needs is considerable. If a family can automatically provide its own survival needs, then oil shortages, drought, food shortages, terrorist attacks, hurricanes, pandemics, earthquakes or economic issues create far less threat or stress.

Portability may be the most important capability of this system, providing self reliance in any location, even if a home must be abandoned. Capable of being towed behind a small car, a self powered climate controlled Lifepod can provide all basic needs in any location or climate.

## CURRENT SITUATION, STRENGTH, THREATS

### **Sustainable economics.**

*We now know that several critical mistakes in science are primary contributors to current global crises. These involve basic misunderstandings of both energy and nature. We have believed that nature is competitive dominant and that energy is a limited resource that must be stored and moved around. These beliefs have created havoc at a global level. Our business and economic models have been based on the same concepts of competitive aggression and lack. We compete to the detriment of our future survival, while the concept of fuel has polluted our entire ecosystem, creating economic slavery and poverty for the majority.*

*Neither concept is correct. Nature is cooperation dominant and abundant energy is available anywhere using zero point technologies and physics. The inevitable emergence of this knowledge will impact every area of human experience and it has already begun. However, we are now faced with an urgent and critical transition from a failing system based on the concept of fuel, to an abundance based economy, understanding that the very concept of fuel is insane. Why transport what is already everywhere?*

**Free, abundant energy inevitably leads to an abundance based economic system.**

## HOW TO GET THERE

### **Transition strategy**

Since shifting from a competitive fuel based economy to a sustainable fuelless economy obsoletes and decentralizes many basic infrastructures, significant job loss and job shifts are inevitable. However this is already happening in our failing economic system. *Transition strategy is critical.* The Lifepod is designed to minimize the complexity, damage and duration of that transition by enabling a family to survive with no outside assistance. *At the same time, the Lifepod quietly introduces the primary elements of a sustainable economy based on corrected physics of energy and food abundance.*

The Lifepod is specifically designed to enable economic transition with minimum disruption in any climate, economy or culture. By protecting the family unit at no cost, it also provides the basis for a decentralized, cooperative dominant culture and economy to emerge.

## CORE ELEMENTS & GOALS

### **Integration and deployment strategy**

The Lifepod integrates existing breakthrough technologies in the areas of superorganic food growth, advanced water access and structuring, energy generation, heating, cooling, lighting, automation and advanced healthcare.

There are many levels to the Lifepod deployment strategy. Each breakthrough employed in the Lifepod can also create a domino effect of potential markets, from transportation to healthcare. The technology behind the energy generators obsoletes all other sources of energy at any scale with far less cost and use of resources. Advanced food and water technologies revolutionize all areas of agriculture, health and water use. The heating and cooling technologies apply to all markets requiring temperature manipulation or filtration. Advanced health technologies can be integrated into food production, water extraction, lighting, air treatment and even construction materials. Waste recovery technologies have applications in mining, sewage treatment, landfill recapture and material science.

By justifying and integrating all these potentials into a single scalable, modular approach, various capabilities can emerge naturally in various markets, rather than

trying to compete directly in areas that may be highly resistant to change. Portable food production does not appear to pose an immediate threat to the energy or transportation industry for example.

### Micro sustainability

The future capability of the Lifepod approach comes from miniaturization. *A small bottle can constantly extract and purify water from air so that it always provides life support.*

This is possible in even the driest climate and removes nothing that is not returned to the environment. The principle is similar to a dehumidifier. *The same bottle can also process and program the water for health and even grow enough algae based nutrients using advanced lighting for an individual to survive.* This life saving personal device could be airlifted and dropped by the millions in disaster and refugee situations.

VALUE BEING RETURNED TO THE PEOPLE

### Conclusion

***Removing scarcity helps eliminate poverty and reduce violence.*** Consuming food and water that benefits from the latest health technologies can dramatically reduces risk and cost of illness and suffering in any culture. ***Reducing the need to work for basic survival removes many of the expenses of living in any economy or culture.*** The Lifepod addresses all these issues with a simple direct approach. As a concept, it is not tied to any particular size or approach, as a trailer, closet, backpack, raft or airdropped self inflating building. It is a concept of decentralized portable survivability that can adapt to the needs of each situation using mass produced modular components.

The Lifepod approach can help resolve disasters, poverty, starvation, healthcare, drought, domestic and community survival, family security, economic stability and environmental recovery. It's primary function is to enable sustainable transition and personal security at no cost. Combining this capability with other strategic breakthroughs creates a powerful combination of solutions for sustainable economic and environmental recovery at any scale.

## MILESTONES & PROPOSED START AND FINISH TIME

Obviously the value of this project to worldwide issues around basic human needs both every day and during disasters, able to be resolved by fine-tuning at the most basic level - right at home - puts us on the brink of imminent solution to be implemented as quickly as possible. Development and production can be immediate.

## COLLABORATIONS AND GAPS

Likely the biggest resistance will come from the corporate culture that has enjoyed keeping humanity enslaved and in fear. It is time for us to break free from this old way. Having individual sovereignty and survivability at home for each and every person and family offers “breathing room” to begin enjoying Life and become the creative beings we were designed to be. It is time for all to have enough food, shelter and safety, thus engendering the freedom that brings forth the best in humanity.

Numerous other projects in this GLC Proposal will overlap and cross-pollinate with this one, particularly those relating to solving world hunger, MIP Peru extending connection with local communities, use and cleanup of water and food sources, Hot Water Balls, and of course education through documentaries, radio, tv, web, etc.

## FINANCIALS

Seed Funding: \$1,000,000

Project Completion in major test regions: \$10,000,000

Initial Global Implementation: \$100,000,000

- with additional funding requests to be considered once implementation and demonstration have been accomplished. At this point we may be merging into such comprehensive new systems that Lifepod will be less required. This system augments recovery from currently unsustainable practices planet-wide.
- Separately justifying and funding dozens of technologies with as many business plans would be complex, both financial and logistically. Since global recovery is synergistic, integration of technologies is as important as individual capabilities.

**- From a financial justification perspective, investing in a single project not only enables urgent individual technologies to emerge as a far larger secondary effect, it simplifies the process into a single management task and focuses integration of cutting edge breakthroughs towards the most important issue; protecting families from the widest range of potential threats during a critical economic and environmental transition process.**

[\[return to projects list\]](#)

## **SOLVING WORLD HUNGER WITH FOCUS AROUND WOMEN AND CHILDREN WITH SPIRULINA, CHLORELLA AND OTHER ALGAE**

Humanities Research Foundation founded by Dr. Theodora Mulder, will work in conjunction with Dr. Christopher Hills Global Hunger Project - Spirulina <http://hillsfoundation.org/> and other organizations such as [actionagainsthunger.org](http://actionagainsthunger.org) and [globalissues.org](http://globalissues.org)

### **CURRENT SITUATION FOR THIS CVAC**

Global hunger now afflicts nearly a billion people worldwide. Severe acute malnutrition, however, is the more immediate killer: it threatens the lives of 34 million children. Every year at least 1 million of them die from malnutrition-related causes.

Although the Hills Foundation moves ahead with solving hunger issues, we look forward to receiving global humanitarian funds to be able to broaden this work into comprehensive regional solutions to food production and availability, water sources, and providing through algae the kind of nutrition that actually carries these people forward out of poverty and malnutrition, to then augment education, opening higher paths of learning, knowledge and life expression.

### **IDEALS ENVISAGED**

**Spirulina**, an algae, is 99% digestible / good for babies through 100 year old centurians; contains a full range of amino acids to feed brain so brain is attracted to higher level awareness & living; it is similar in composition to blood, so it is like having transfusion; it is a key to sustainable living on Planet Earth. Chlorella, blue green algae and other algae hold the secret to healthfully feeding the many on Earth, complimenting other resources.

### **CURRENT SITUATION, STRENGTH, THREATS**

In a world that actually has enough for all, it is a horrifying fact that goods and simple survival resources are appropriated in such imbalanced ways. Many organizations that say they are resolving hunger, are minimally effective at best. It is time to implement real solutions that interface with other aspects of our proposals, such as the Lifepod, teaching people how to grow food at home, renewing clean and abundant water supplies. This is obviously not a simple problem, and it is exacerbated by critical imbalances on the planet. Our entire "4 Keys to Life" project proposals feed into one another and support the potential for well balanced, ecological and sustainable systems for all of humanities' needs to be met for food, shelter, water, sanitation, health care and energy. This one project in and of itself can solve the immediate problem, yet it needs to be backed up by the rest of the projects in this proposal. We request prompt funding that the many who are ready and willing to go to work for planetary change can jump in and facilitate this process immediately.

## HISTORY

Born in Grimsby, England in 1926, Dr. Hills retired as a successful businessman by age 30. As a world traveler (visiting 89 countries of the world) Dr. Hills was struck by the hopeless poverty and hunger and vowed to do all in his power to find a solution. Dr. Hills was elected President of the World Yoga Society and organized the World Conference on Scientific Yoga in New Delhi which brought together 800 Western Scientists and Eastern Yogis and "made Yogic history". In 1972 he founded the University of the Trees, as a progressive community whose courses focused on the study of consciousness and practiced the dynamics of interpersonal relationship.

## HOW TO GET THERE

Light Force has donated millions in Spirulina products to feed hungry people all over the world. In 1979, Dr. Hills founded the Light Force Company in Santa Cruz, California, to create an economic base for making the super-nutrient algae Spirulina available to people around the globe. He is largely responsible for the introduction of this superfood to the western world. Founder of companies in Japan, the West Indies, USA, Vietnam, Israel and Kenya, he organized three Spirulina farms in California, Israel and Taiwan.

In 1985, Dr. Hills made another major contribution with the development of a Carotene-rich extract from Spirulina and Dunaliella algae called Phycotene. In 1986 the results of a research contract into Phycotene by Harvard University (which he financed) proved so exciting that it instigated the current interest in Phytochemicals and anti-oxidants. At that time epidemiological studies showed that populations eating certain fruits and vegetables had a reduced risk of cancer. The research proved that Beta Carotene and other antioxidants cured cancer in the hamster cheek pouch model. These were the first animal studies with these anti-oxidants. Another research contract with Dana Faber Cancer Institute showed great promise with pure Phycocyanin extracted from Spirulina.

Dr. Hills wrote 2 dozen books on conflict resolution to meditation, divination, and cutting edge breakthroughs in science and the heart of consciousness. He created a sanctuary on a 50 acre redwood rain forest in California to honor energy of the Divine Feminine. He left his body on January 31st 1997 but his work, vision and heart-based consciousness is still very present in his eternal guiding spirit. His wife, Penny Slinger Hills, now runs the estate, keeping the vision alive, and his son John Hills heads the Christopher Hills Foundation, continuing with the global hunger mission.

**MILESTONES, START AND FINISH TIME, VALUE BEING RETURNED TO PEOPLE**  
There is no time like NOW to begin putting an end to world hunger once and for all, allowing us to move into a viable future with bodies of humanity nourished, fed and ready to live abundant, productive, creative lives. As we pull our brothers and sisters from the depths of loss and despair, we honor all Life. We request imminent support for this project to be started as promptly as possible, as figures vary, but every few minutes children die around the world from malnutrition and hunger. As we remove the "fat" or skimming from an organization of this sort, we have much more success possible. Now is the time to start and we continue until this entire dynamic has been changed around to productivity, health, wellness, enough and abundance for all. As we implement this list of proposals here, we shift the entire planetary paradigm with LOVE and respect for ALL Life. We know it is done when this is true on all counts.

**COLLABORATIONS AND GAPS**

We welcome the opportunity to go forth into places where there is need to truly fill that need, and integrate many other additional solutions to transform these challenged places and people, into living lives filled with enough, drawing forth the abundance of where they are in creative ways.

We would collaborate with many of the projects within this GLC Proposal - from gardening and water/carbon sequestration to establish local food supplies, to tree planting and restoring soils with rock dust and organic matter, education for mothers and children, documentaries and more. Mothers and children seem to be the most at risk as far as insufficient nutrition, so our project would be focused around them, though serve the entire community. We see this as a cohesive integration of those elements needed for beings to be happy, healthy and whole on Planet Earth.

GAPS: Corporations such as Nestle have gone in and offered manufactured “non-foods,” disrupting the entire natural system. As we restore natural balance and assist the people to reconnect to methods of producing their own healthy food, restoring soil, water and other basic needs, we see such corporate activity falling away due to lack of value. This will take funding, education and encouragement, which we request now on behalf of these people. Thank you.

## FINANCIALS

SEED MONEY - Initiate project: \$1,000,000

EXTEND PROJECT: \$10,000,000

GLOBAL DISTRIBUTION AND INTEGRATION WITH OTHER PROJECTS HEREIN: \$399,000,000 (Requesting also more funding as required, however we expect these situations to begin resolving as we implement entire compendium projects here).

CONTACT: Dr. Theodora Mulder, Humanities Research Foundation (see GLC-Bios)

#### CURRENT STATUS OF THIS CVAC

We continue with our research, writing and films, following our destiny to bring this work into the world. There is much technology at our fingertips to make our lives better, however it will take funding to bring this forward and move it into mainstream. Our lives are already dedicated in this direction, we will be honored to receive funding to make this “new science” available to support a viable future for humanity.

#### VALUE BEING RETURNED TO THE PEOPLE

**CROP CIRCLE AND ELECTROMAGNETIC RESEARCH: ELECTROMAGNETIC INCREASE OF CEREAL CROP FOOD PRODUCTION TO FEED THE BILLIONS NOW ON PLANET EARTH, ENHANCING CEREAL FOOD PRODUCTION BY 50% WITH ELECTROMAGNETIC FREQUENCIES.**

#### IDEALS ENVISAGED

My associates and I have researched cereal crops, where crop circles exist, that produce up to 50% more food. These electromagnetics support vital Life through “charge density pulses.” We are capable of demonstrating this worldwide. Earth is designed to be a place where we have much to learn about our biology in order to have sustainability for infinity. [*Energy and Consciousness Vol. 2*, by Penny Kelly with Dr. William Leavengood p. 206]

#### CORE ELEMENTS & GOALS

The structure of global consciousness and well being shifts as we put clear energetic information into the planetary grid. As we open to new innovative awarenesses to improve how we live in this world, we will open doors produce food for all.

Patty Greer’s research on crop circles bears critical clues to producing more food for all people on Earth.

#### CURRENT SITUATION, STRENGTH, THREATS

Additional research on “charging” seeds as is done by sending seeds into space and bringing them back to grow 100% larger vegetables, fruits and grains. Such solutions are at our fingertips to solve global hunger problems by ecological productive methods. Perhaps the conservative contingency would fear this, however with funding to complete proper research there is a vast opening for the growth of human understanding in this arena.

#### COLLABORATIONS AND GAPS

There are those who are still not comfortable with understanding the use of energy, magnetics and other such solutions, so there may be some resistance from the conservative gallery. However this is the cutting edge of where we are going. Understanding higher levels of how to operate in this energy world holds keys to moving into a more integrated future. When funded we will seek out others researching in this area

#### MILESTONES & PROPOSED START AND FINISH TIME

Much research has already been done. Funding will assist us to bring it forward and make it applicable in the transitional public sector resolving hunger and food shortage issues. Immediate funding assistance will be utilized to turn this research into comprehensive accessible resources for many working on planetary solutions. Once such things become more mainstream we will integrate this knowledge into conventional societal morés. Within a few years with such efforts, we should see ourselves accessing an entirely new level of commandeering a new harmonious, ecological relationship with our Life here on planet Earth.

#### FINANCIALS

SEED: \$3,000,000

PROJECT: \$9,000,000

GLOBAL: \$58,000,000

## **THE BOILING BALL BY ROMAN LIGHTWORKER**

### CURRENT SITUATION FOR THIS CVAC

Many people around the world in remote towns and villages or slums of big cities do not have enough power to heat, purify water or generate needed electricity. The boiling ball can help solve these issues in a simple, effective and inexpensive way.

We are practicing use of this technology on a regular basis, and await funding to be able to carry it forward.

<http://youtu.be/P5TH0Gho6xM>

### IDEALS ENVISAGED

Roman has developed a ball that can boil water instantly with just 200w of electricity, to be made for less than \$100. Michael Tellingner of the Ubuntu party invited him to South Africa to do a demonstration and teach how this works to the whole community.

### HOW TO GET THERE

The Steam Ball is a metallic structure based on sacred proportion, capable of agitating the water so fast that it can boil it instantly with a very small amount of energy.

The applications are incredible as much as infinite: from desalinization to cooking, heating system of pressure maker.

By combining this technology with an a wind turbine, the water pressure can be use to generate current.

And all of this for less than a \$100

#### CORE ELEMENTS & GOALS

The goal is to provide a kit with solar panel, electricity generator and battery so it can work day and night and bring heat, pure drinking water and pressure to constantly recharge it.

The science behind this process offers the possibility of numerous applications: water heater, domestic heating, production of drinking water, production of electricity by energy surplus, etc. It must be done by a professional experienced in handling electrical appliances. The process show several physical effects that are still largely unknown, yet with great potential. Funding will largely assist further research and practical application for diverse uses.

#### VALUE BEING RETURNED TO THE PEOPLE

Ideally we'd love to send it for free to countries that have an immediate need for safe drinking water. This is a transitional low impact solution to solve desperate human needs, until we establish long term comprehensive life changing solutions to these regions.

#### MILESTONES, PROPOSED START AND FINISH TIME

We are ready and able to go into production with some funds provided. Would like to build a wind turbine and develop the added potential for generating current. Within a few months we can easily have a number of balls made and being used in regions whee there is a need. We will thus be able to work out any refinements and further develop the project.

#### COLLABORATIONS & GAPS

The Boiling Ball project is fully compatible to being integrated with numerous other CVAC projects within this proposal, including feeding the hungry, going into communities to help develop gardens, providing electricity and sanitary water to run schools in remote locations, etc.

## FINANCIALS

SEED MONEY TO GET STARTED: \$300,000

PROJECT FUNDING NEEDED: \$900,000

GLOBAL PRODUCTION AND DISTRIBUTION: \$30,000,000

CONTACT: Roman Lightworker (see GLC-Bios)
